

I wish to express my unconditional support for this proposed rule. As a frequent user of the 160 meter amateur band I have witnessed first hand the interference between strong local wide bandwidth and narrow bandwidth weak signal traffic in the 1800 to 1840 KHz portion of this band. At the same time I have noted the relatively small number of wide bandwidth users in the portion of the band between 1900 and 2000 KHz. This rule making would serve to spread the wide bandwidth users over more of the 160 meter allocation and alleviate intermode interference.

Respectfully,

Gary G. Hembree
